

Marine Project for Children

by Jenny Baer-Pásztory (MSc, BSc)

Duration: 6 lessons or more

Summary: The deep sea environment, mangroves and plastic pollution. The largest, fastest and most poisonous marine creatures...Jenny has many stories to tell and a wealth of knowledge to share from her many years of professional experience, travelling the world as a marine biologist.

Using a mixture of formal teaching and interactive group work, children are sensitized to the beauty and vulnerability of the world's seas and oceans, whilst practicing their English (almost without noticing) at the same time.

Profile: Jenny holds a BSc in Marine and Freshwater Biology and a MSc in Aquatic Resource Management. She is bilingual, having been born to a British mother and a German father in 1965. She has spent the past 25 years managing a variety of environmental projects world-wide and has made a home for herself and her Austro-Hungarian husband, Tibor, in the lovely Wienerwald south-west of Vienna.
